

Wireless Wheel Speed Sensors (RLWSSENSOR)

The VBOX Wireless Wheel Speed Sensors deliver precise, real-time 100 Hz wheel speed measurements for a variety of vehicle testing applications.

Designed for straightforward installation, these compact sensors mount directly onto the wheel, eliminating the need for traditional stator rods and encoders, and significantly reducing setup time.

Built for durability, the sensors are water- and weatherproof, making them ideal for a wide range of testing conditions, including aquaplaning scenarios. Speed data is output via CAN, ensuring seamless integration with VBOX data loggers or existing data acquisition systems without requiring frequency-based measurement translation.
